Decorative Doorstops/Usable Art

Making these doorstops unique is the very decorative coverings utilized to encase the weighted bag of sand. The doorstops function by placing them on the floor adjacent to the door to be held open. In addition, secondary to their very decorative design, the doorstops can be utilized as stand alone art or incorporated into any variety of decorative schemes for any desired room.

Construction of Door Stops

Step 1. Sew together two round pieces of fabric (approximate diameter to range between 8" and 11") to create a circle with small opening and flange to permit filling with sand or other like material - fill and then close opening with thread, hot glue or other means to secure the contents. See Figure 1 on Page 3.

Step 2. Sew together a piece of fabric or fabrics that has pockets on the longest edges to accommodate a cord. The fabric dimensions are determined by the diameter of the sand

filled form. See Figure 2 on Page 3.

Step 3. Gather up one end of the fabric covering and place the sand form inside and then gather up the other end and secure.

See Figure 3 on Page 3.

Step 4. Attach top embellishment or ornament with hot glue, thread or other materials. See Figure 4 on Page 3.
